

CCDC Inject

INJECT NAME	Discover Network Processes
INJECT ID	WINS05A

INJECT DESCRIPTION:

The Information Security Team is concerned that some of our Windows servers may have rogue processes listening on network connections. Evaluate each Windows server for this possibility. Document what processes are running and if any of them appear to be suspicious.

INJECT DELIVERABLE

Respond with a business memo which documents the command(s) you used to view network processes and which ports/protocols they are using. Present this information in a table. For each entry provide your evaluation as to whether they are suspicious or not and your reasoning for that evaluation.
