

# CCDC Inject

<b>INJECT NAME</b>	Build a Docker Application
<b>INJECT ID</b>	VIRT02T

**INJECT DESCRIPTION:**

Create a simple web application in Python. It can be a simple “Hello World”, or anything else to illustrate functionality. Place the files in a directory. Build the docker image, then run the docker image, mapping port 80 to some other port, such as 2000 so as to not interfere with other production web application on the server.

**INJECT DELIVERABLE**

Respond with a business memo that documents your work with appropriate screenshots, and a screenshot showing the docker application working.
