

# CCDC Inject

<b>INJECT NAME</b>	Restrict Inter-segment Packet Flows
<b>INJECT ID</b>	TOOL06A

## **INJECT DESCRIPTION:**

The internal network is composed of multiple LAN segments. Using the networking component that are the core of the internal network: make configuration changes to limit the flow of packets between segments to only those that are expected. Document your work.

## **INJECT DELIVERABLE**

Respond with a business memo that outlines the expected flow of packets and specifically the configuration changes you made on which device(s) to restrict the flow in accordance with the expected flows.

Document the flow by segment, the protocols (tcp/udp with port numbers) and direction (egress, ingress or both).
