

CCDC Inject

INJECT NAME	Prototype a DRP Solution
INJECT ID	REGN12A

INJECT DESCRIPTION:

The CIO has contracted with AWS for a virtual environment which might be used as part of the organization's disaster recovery strategy. Use the Ecomm server as a test case, recreate the Ecomm services on a server in the AWS environment. Consider using a container to do this, or install natively on a server in the AWS POD. Use the interconnect established earlier to transfer needed files.

INJECT DELIVERABLE

Respond with a clearly written business memo that describes the approach taken and the steps taken to accomplish this test. Show evidence of a working application. Be sure the evidence demonstrates this from the AWS POD and not the existing server in the Virtual Environment (NetLab).
