CCDC Inject

INJECT NAME	Develop a Script to Monitor File System Space
INJECT ID	SVRA09T

INJECT DESCRIPTION:
A vulnerability to server availability is the lack of file space. Either through malicious attack or simply inattention to large files a server's file system filled so that there is no remaining space.

To mitigate this, write a script that can be run in as a CRON job periodically to monitor the overall available space in the file system, and send alerts when the available space space exceed 75% of the total space.

Write a script for use on Linux servers, and a script for use with Windows servers.

INJECT DELIVERABLE
Respond with a business memo that shows the script for Linux and Windows. With a screen shot validate that the script functions as needed. Show the script in a CRON queue.
