CCDC Inject

INJECT NAME	Create a Secure Storage Area
INJECT ID	CRYP05A

INJECT DESCRIPTION:
For each of the web servers in the topology, identify the key files (configuration and content) that should be in a backup repository so that the web site can be rapidly restored should it become corrupt or defaced. These files should be stored in an encrypted area to minimize tampering by unauthorized access. If a hacker would compromise the server, the corruption of these files backup files would be more difficult.

You may need to select a vault product or other solutions.

INJECT DELIVERABLE
Respond with a business memo that specifically addresses:

1.) Identify the files that were selected to be in the backup repository for each web server.

2.) Identify the product used to create the encrypted area/vault.

3.) Discuss how the solution provides protection from unauthorized disclosure, access and tampering.
